Ricardo Striquer Soares - Curitiba/PR/Brazil - Staff Software Engineer | Systems Architect | High Availability Specialist
email: rstriquer@gmail.com - Phone: +55 41 984.466.360
GitHub: https://github.com/rstriquer - LinkedIn: https://linkedin.com/in/rstriquer/

25+ Years of Experience. Results-oriented Software Architect with a "Dominant & Influential" (D.I.S.C.) professional profile, characterized by high initiative, decisive problem-solving, and a focus on high-stakes innovation. Expert at leading complex technical roadmaps and engineering high-traffic, low-latency environments. A unique hybrid of deep-level systems programming (C, Networking, SDR) and modern full-stack architecture (Node.js, NestJS, GoLang, Cloud Native).

Core Competencies

- **High-Availability Architecture**: Specialist in mission-critical and "Zero-Downtime" systems, with extensive experience in microservices architecture, load balancing, and infrastructure optimization on a global scale (Casinos and E-commerce);
- **Systems & Engineering**: Deep knowledge of Unix-like systems (Linux/FreeBSD), advanced memory management and low-level engineering, ensuring extreme performance where resources are scarce;
- **Fintech & Business Intelligence**: Unique expertise in the Brazilian financial and accounting domain, combining investment management with massive data processing systems (Big Data with tens of millions of records);
- **AI & Emerging Tech**: Pioneering the implementation of Artificial Intelligence (Watson, ChatGPT), Blockchain, and IoT solutions, transforming emerging technologies into viable commercial products (History-Teller);
- **Engineering Leadership & Strategy**: Over 10 years managing multidisciplinary teams and founding companies (WB4B), applying Agile methodologies (Scrum, XP, Kanban) and ITIL processes to ensure the delivery of high-performance software;

Highlighted Projects

- **Schildbach Bitcoin Wallet (Performance & Recovery Optimization)**: Engineered critical performance enhancements for a legacy Java-based Android Bitcoin wallet to optimize memory-to-filesystem data persistence. By refactoring the storage layer, I significantly reduced I/O latency and enhanced crash recovery speed, minimizing the need for full ledger re-scans after unexpected shutdowns. This project required a comprehensive modernization of a legacy build environment (Maven 3/pre-Android Studio), demonstrating deep expertise in maintaining and optimizing high-stakes financial software and blockchain ledger integrity. Jul, 2023;
- **History-Teller (AI-Driven Video Synthesis Engine)**: Architected and developed an automated end-to-end content creation pipeline that transforms raw text into fully produced YouTube-ready videos. The system leverages IBM Watson Natural Language Understanding for semantic analysis and keyword abstraction, dynamically sourcing relevant visual assets from global databases. It orchestrates Google Text-to-Speech for professional voiceover synthesis, synchronized with a custom-built audio timing engine and automated FFmpeg media processing for video assembly. This project showcases advanced proficiency in AI orchestration, multi-stream synchronization, and the automation of complex creative workflows. Dec 2022;
- **PsicologoAgora.com.br (Real-Time HealthTech Platform)**: Spearheaded the development and business strategy of a web-based telepsychology directory featuring browser-native, peer-to-peer video and voice communication via WebRTC. Engineered a high-performance distributed processing layer using CRC32 and data validation algorithms to optimize client-server synchronization and database integrity. Beyond my role as Lead Architect and Infrastructure Administrator, I acted as a Co-founder and Entrepreneur, managing stakeholder relationships and strategic partnerships. This project demonstrates a successful integration of social authentication (OAuth), zero-install real-time media, and robust backend scalability for sensitive healthcare data. Dec. 2020;
- **Geospatial Intelligence & News Mining System (Mineropar)**: Spearheaded the architecture and deployment of a high-performance web crawling engine for the Brazilian government, integrating Natural Language Processing (NLP) to automate the mining and categorization of large-scale industrial data. Engineered a custom GIS integration to convert complex ArcGIS data into MapServer formats, enabling real-time geospatial visualization across Google Maps and OpenStreetMap. As Technical Lead, I managed the full SDLC and a multidisciplinary team, successfully streamlining data intelligence for government stakeholders by replacing manual research with an automated, real-time insights dashboard.Execution: Nov, 2011;
- **FirstClass E-commerce Framework (Acquired by MadeiraMadeira)**: Architected and developed a comprehensive, high-scalability e-commerce platform that served as the foundational technology for one of Brazil's largest retailers. Engineered a modular framework integrating complex international payment gateways, multi-carrier shipping logistics, and advanced data mining systems. Beyond core development, I served as a Security Expert, implementing multi-layered defense protocols to ensure transactional integrity. This project's successful acquisition by MadeiraMadeira stands as a testament to its enterprise-grade architecture and robust performance in a high-traffic retail environment. Execution: 2007 - 2014;
- **SaaS Email Intelligence Platform**: Engineered a high-throughput SaaS email marketing system featuring a proprietary AI-based Specialist System designed to categorize and process tens of thousands of daily interactions. Developed a custom SMTP reception subsystem from the ground up to validate messages and interpret complex mail delivery errors with high precision. As the lead System Architect and Database Administrator, I scaled this platform into a multi-state operation in Brazil, transforming raw protocol data into actionable business intelligence reports for enterprise clients. Execution: 2009-2014;

Ricardo Striquer Soares - Curitiba/PR/Brazil - Staff Software Engineer | Systems Architect | High Availability Specialist

Natural Languages (languages)

- **Portuguese**: Native;
- **English**: Full Professional Proficiency (C1 Advanced Certified - EF SET). Experienced in multicultural environments with a high level of technical and conversational fluency;
- **Spanish**: Professional Working Proficiency (B2 Upper Certified - Cervantes Institute). Capable of professional interaction and technical documentation;
- **Italian**, **French**, & **German**: Limited Working Proficiency (Technical Reading and Documentation).

Employment History (last ones)

- **Undisclosed Casino Company - Full stack Engineer (contractor) - Nov/2023 to Present**: Optimizing database architectures to support massive concurrent user traffic while maintaining rigorous security standards for sensitive financial data;
- **WB4B - Founder & Principal Engineer - Since Mar/2023**: Established a strategic software consultancy to deliver high-end systems architecture and full-stack development for diverse business domains;
- **TheoremOne - Full Stack Developer (contractor) - Jul/22 to Mar/23**: Collaborated within cross-functional, distributed teams for a premier US-based innovation consultancy, engineering complex enterprise solutions for Fortune 500-level clients;
- **Exitlag - Full stack Developer (contractor) - Feb/22 to Jul/22**: Engineered performance-critical features for a globally recognized gaming optimization platform focused on network latency reduction;
- **SM.Places - Fullstack Developer (contractor) - Oct/20 to Feb/22**: Developed and maintained full-stack applications with a focus on modular architecture and third-party API integrations for Brazilian digital company and big telecommunication players;
- **Professionally working with IT in many projects since 1998.**

Publications

- "**SSH Private Key Files**". pt-BR book talking about personal use of cryptographic keys with SSH and many other tools. http://www.programabrasil.org/ssh-private-key-files/
- Overload attack using SMTP Injection. What is it, how is it and how to prevent it? - Jul/2008
- Multi-thread, process control and parallel programming in PHP http://www.programabrasil.org/multi-thread-controle-de-processos-e-programacao-paralela-em-php/
- E-commerce on the Cloud: Learn more about Rackspace and Amazon AWS -Dez/2012 https://issuu.com/ecommercebrasil/docs/ecbr_12_issu/64

Certificates

- Laravel TestDome https://www.testdome.com/certificates/e11a2e06de564b1d886bfd4c8a08f2d6
- LinkedIn React.JS competency

Academic History

- Bachelor's Degree in Software Engineering (In Progress) - Unifatecie - 2023 (expected) to 2027;
- Financial Management - UniOpet - 2009 to 2011;
- Strategic Sales Management - Martinus College - 2005 to 2006;
- Bachelor's Degree in Systems Analysis - ESEEI College - 2001 to 2002;
- Data Processing Technician - Dominus College - 1996 to 2000;

Other activities

- Artificial Intelligence: Increase your productivity and accelerate your career - Escola Conquer;
- Agile Methodologies - Unifatecie;
- NodeJS, React & GraphQL - Youtube Course;
- Laravel8, Inertia Js, Vue Js & Tailwind CSS - Youtube Course;
- Object Orientation with Java - Brazilian Technological Institute of Aeronautics (ITA);
- IBM Blockchain Foundation for Developers - IBM;

Technical Skills Matrix

- Diversified knowledge beyond the IT area, with emphasis on team management, brazilian accounting, financial, commercial, marketing, advertising, advertising and design.
- More than 25 years of professional experience with high-traffic servers;
- Professional development experience in several projects where I could implement IoT (Internet of Things), AI (Specialist System Artificial Intelligence Type), ChatGPT and IBM Watson integration, Blockchain, Amazon AWS, GCP (Google Cloud Platform), BI (Business Intelligence);
- Working experience with Unix (IBM-AIX), Unix-Like (Linux/FreeBSD) and Windows. Knowledge in Linux servers (RH, Ubuntu, Debian and Amazon), FreeBSD, IBM-AIX and Windows with emphasis on software such as apache,nginx,iptables (with and without csf automation), qmail,postfix, Microsoft IIS, MySQL/MariaDB,PostgreSQL and others;
- Programming Languages (backend and front-end):

- Advanced programming level: PHP (on 3, 4, 5, 7 and 8 versions and Zend Framework, Zend Expressive, Doctrine (in Laravel and CodeIgniter experience), Laravel 5, 8 e 10 with Livewire working both on VueJS and ReactJS, Symfony, CodeIgniter, phpUnit and IdeiasLang, a PHP framework of my own) and SQL.
- High programming level: C, Bash/Sh, Node.JS (Jest, NestJS) and Basic (pure Basic, VB and VB.Net with .Net Core experience).
- Intermediate level (with experience of at least one year of daily professional work): GoLang (frameworkless, Fyne, Wails), Java (8, 11 e 16 with Spring, Hibernate, jUnit), C#.Net (.Net Core as well as .Net Framework), C++ (Borland C++ Builder e GNU GCC), NinjaScript, MQL 4 and 5,Progress 4GL and Delphi;
- Experience with front-end development using modern frameworks such as React (with and without Next.js) and Vue.js, and styling tools like TailwindCSS and Twitter Bootstrap. I also have worked with jQuery, Prototype, MVC in Java like JWT;

- Experience with all phases of the project development lifecycle (SDLC), from requirements gathering with clients to testing and delivery process, using both agile methodologies and the waterfall model with emphasis on eXtreme Programing (XP), Scrum, Agile RUP and FDD (Feature Driven Development) methodologies. Experience with performance requirements before and after system development. Extensive use of Kanban tools and techniques. Knowledge in ITIL methodologies and processes (including ITSM) with OTRS software operation;
- Experience of more than 10 years in management of small and medium teams in the area of IT making use of both development methodologies as well as maintenance and support systems;
- I implemented microservices architecture with API (RESTful, REST+JSON, SOAP+XML) using design patterns as Single Page Application (SPA), Multi Page Application (MPA) and messaging (push-pull, polling). As well as GraphQL API interfaces;
- Knowledge in JSON, XML, xBase (Clipper and DBase storage structure), DAT (Cobol storage structure) and CSV structures;
- Work experience in CI/CD (Continuous Development, Integration and Deployment) with automation tools like Jenkins and bamboo for deploying and rolling back web apps and using InstallShield to distribute desktop applications brazilian nationwide;
- Knowledge in security architectures and layers (OAuth, OAuth2.0), even acting as Security Analyst in some projects making use of tools like nmap e ZAP (OWASP Zed Attack Proxy);
- Knowledge of the Docker and Vagrant tools, both operation and configuration. Experience in Terraform to built environments;
- High level of knowledge in the MySQL database and MariaDB (including knowledge in partitioning and replication), PostgreSQL and Progress, good knowledge of Oracle (i5 to i9 com PL/SQL and 12c), Informix and MS SQL Server databases. Development experience in Progress 4GL and procedures for both MySQL and PostgreSQL. Experience with Grafana and telegraf/influxdb. Professional experience with ElasticSearch, Redis, Sphinx and AWS DynamoDB. Experience with bases of tens of millions of records and dozens of GB of information;
- Knowledge in automation of tests with the tools Selenium, Jenkins, Apache AB, Apache JMeter and Atlassian Bamboo;
- Versioning of code with GIT (github, bitbucket, gitlab and Amazon CodeCommit) with pull-request technique (branch use to team code review);
- Knowledge in database structure using relational data diagrams tools such as Visio (Microsoft) and Workbench (MySQL);
- Experience developing UML documentation using PlantUML, Argo-UML, Rational Rose (IBM). Experience in the development of BPMN diagrams with Bizagi and Yaoqiang software;
- High experience in performance enhancements by reducing database call, expanding cache (tmpfs, AWS Redis e Memcached), CDN and shared memory usage (tmpfs, APC and “SHM” functions in PHP and memory addressing in C), query and algorithms enhancements as well as modifying structure and software architecture (from a centralized environment to a distributed environment utilizing elasticity on EC2 and microservices);
- Knowledge in applications such as SAP Business One (B1), SAP/R3, Microsoft Dynamics CRM, SalesForce, SugarCRM and Magnus EMS (Datasul EMS). I even started to develop my own ERP without MRP and MRP II implementations, but I had experience creating a CAM (Computer Aided Manufacturing) system which was based on the concept of manufacturing cost centers;
- Development of decryption software for the Linux platform in C language and with Progress database using the language 4GL;
- Developing Stock exchange market tracking scripts using C# on MetaTrader 4 and 5 as well as NinjaTrader platforms, including form implementation (similar to Windows Forms on .NET);
- Knowledge and application of theories such as data warehousing and data mining as well as interpretation of natural language;
- Experience with development of map systems using MapServer and understanding of knowledge such as spatial projection, SVG and GML. Data import and manipulation from ArcView;
